

SCRUM SPRINT REVIEW & STRATEGIC ROADMAP • V.0.4.6 (BUILD 17)

HCP Profiling Application

Complete Lifecycle Analysis Across 3 Core Pillars: Past, Present, and Future Updates

ACTIVE RELEASE	BACKEND STANDARD	TARGET AUDIENCE	DATE & STATUS
V.0.4.6 (Build 17)	ERPNext v15 Multi-Tenant	Product Owners, Scrum, SFE	Sept 17, 2026 • Verified

SLIDE 1

EXECUTIVE SCOPE

Executive Scope & Strategic Alignment

Establishing project boundaries, core pillars, and commercial cross-functional objectives.

The 3 Core Keypoints

- **Past Updates:** Historical retrieval of V.0.1.0 - V.0.4.2 architecture.
- **Present Updates:** Live applied features in active V.0.4.6 (Build 17).
- **Future Updates:** The 8 essential field enhancements for upcoming sprints.

Enterprise Integration

- 1:1 alignment with ERPNext v15 workflow engine.
- Universal HCP vs Program-specific HCP Account masterlist.
- Dual-Track onboarding eliminating bottleneck for existing doctors.

Commercial Personas

- **Field MedReps:** Rapid doctor profiling & continuous resubmissions.
- **SFE Specialists:** Masterlist curation & facility approval.
- **District Managers:** Territory-scoped new doctor reviews.

SPEAKER NOTES

"Good morning team and stakeholders. Today we present the complete Scrum Review for the HCP Profiling App, structured around our 3 core keypoints: Past Updates (retrieving our versioning documentation and foundations), Present Updates (the live applied functionality across V.0.4.3 through V.0.4.6), and Future Updates (the 8 essential mobile workflow enhancements for upcoming sprints)."

Table of Contents: Structural Agenda

Four thematic sections guiding the Scrum Sprint Review and strategic discussion.

SECTION	SLIDES	CORE TOPIC	KEY DISCUSSION TAKEAWAY
Section 1: Executive Scope	Slides 1 - 3	Executive Alignment & Strategic Framework	Introduces project objectives, 3-pillar framework, and scope boundaries across commercial teams.
Section 2: Past Updates	Slides 4 - 5	Versioning History & System Foundations	Chronological retrieval of V.0.1.0 through V.0.4.2 milestones, dual-track onboarding, and two-tier masterlist design.
Section 3: Present Updates	Slides 6 - 8	Active Release V.0.4.6 Applied Features	Zero-deletion policy for added institutions, continuous modify & resubmit, SFE role alignment, rejection note isolation, and dynamic notes.
Section 4: Future Roadmap & Demo	Slides 9 - 12	8 Mobile Enhancements, Demo, & Retrospective	Consent placement, hidden Others tab, GPS tracking, mandatory fields, duplicate detection, test credentials, and sprint learnings.

SPEAKER NOTES

"Our Table of Contents is organized into 4 distinct sections. Section 1 establishes our executive alignment and introduces the 3 Core Keypoints framework. In Section 2, we review Past Updates from V.0.1.0 to V.0.4.2. In Section 3, we demonstrate Present Updates in our active V.0.4.6 release, detailing how we eliminated deletion risks to allow continuous modify & resubmit, resolved SFE workflow permissions, isolated rejection notes, and unlocked pending facility profiling. Finally, in Section 4, we examine our Future Roadmap covering all 8 field enhancements, followed by our live demonstration script and sprint retrospective."

SLIDE 3

EXECUTIVE AGENDA

Executive Agenda: The 3 Core Keypoints

High-level strategic briefing across the three project lifecycle horizons.

1. Past Updates (V.0.1.0 - V.0.4.2)

- Chronological versioning evolution retrieved from project archives.
- Two-Tier Masterlist (Universal HCP vs Program HCP Account).
- Dual-Track Profiling: Instant 0-approval processing for verified doctors.
- PSGC geographic auto-resolution & territory scoping.

2. Present Updates (V.0.4.6 Build 17)

- **Institution Non-Deletion:** Complete removal of discard option; continuous modify & resubmit.
- **SFE Workflow & Role Alignment:** Fixed HTTP 417 via SFE role assignment & multi-role permissions.
- **Rejection Note Isolation:** Red banners only appear on truly rejected submissions.
- **Dynamic Approval Notes:** 'not yet approved' → 'now approved'.

3. Future Updates (The 8 Suggestions)

- Consent positioned last (Doctor Info → Questionnaire → Consent).
- Others tab hidden & Always-active background GPS.
- Mandatory field legend & explicit asterisks (*).
- Missing fields pop-up modal & Real-time duplicate detection.

SPEAKER NOTES

"This agenda captures our complete trajectory: Keypoint 1 reviews past versions from V.0.1.0 to V.0.4.2. Keypoint 2 showcases the applied features of the active V.0.4.6 release, specifically our zero-deletion guarantee for added institutions, SFE role alignment, rejection note isolation, and dynamic approval notes. Keypoint 3 details the 8 specific field enhancements requested for future sprints."

SLIDE 4

KEYPOINT 1: PAST UPDATES

Past Updates: Versioning Evolution & Documentation

Historical roadmap milestones retrieved from CHANGELOG.md & release archives.

V.0.1.0: Foundation

- Initial Flutter cross-platform architecture.
- ERPNext v15 REST API integration.
- Two-Tier Masterlist (HCP vs HCP Account).
- Offline SQLite database initialization.

V.0.2.0 - V.0.2.6: Scoping

- Add New Institution workflow & SFE review.
- DSM territory scoping & approval queues.
- PSGC geographic auto-resolution.
- Rejection feedback taxonomy.

V.0.3.0 - V.0.3.1: Notes

- Dynamic approval status notes on ERPNext.
- Predictive search over 7,000+ facilities.
- Duplicate warning banner with 1-tap fill.
- Renamed to 'Institution Submission'.

V.0.4.0 - V.0.4.2: Directory

- Dedicated InstitutionDirectoryScreen.
- ERPNext Desk List View table alignment.
- SFE full administrative parity with Admin.
- Collapsible search filter engine & clear badge.

SPEAKER NOTES

"This historical slide documents our engineering trajectory: V.0.1.0 established core integration; V.0.2 series introduced the institution approval engine, PSGC hierarchy, and DSM territory scoping; V.0.3 series introduced dynamic approval notes; and V.0.4 series delivered the master institution directory with SFE admin parity and collapsible filters."

SLIDE 5

KEYPOINT 1: PAST UPDATES

Past Updates: Dual-Track Doctor Profiling Workflow

Strict alignment with ERPNext HCP Profile Submission WF: 0-bottleneck processing for verified doctors.

Track A: Existing Doctor ('Existing HCP')

- **Selection:** MedRep selects existing doctor from verified national masterlist.
- **Action Applied:** 'Submit for Processing' (doc.profile_action == "Existing HCP").
- **State Transition:** Directly transitions to **PROCESSED**.
- **Zero Manager Bottleneck: REQUIRES NO MANAGERIAL APPROVAL.** Eliminates administrative delays for verified doctors.
- **Automatic Direct Sync:** Instantly syncs preferred features into HCP Masterlist and links local program HCP Account.

Track B: New Doctor ('+ Add New Doctor')

- **Selection:** MedRep enters new doctor details (PRC ID, Name, Specialty, Clinic).
- **Action Applied:** 'Submit for Approval' (doc.profile_action == "New HCP").
- **State Transition:** Enters **PENDING APPROVAL** state.
- **Manager Review:** Scoped to District Sales Manager (DSM) queue for validation.
- **DSM Approval:** Clicks 'Approve' → State: **APPROVED** → Committed to Masterlist.
- **DSM Rejection:** Selects rejection reason → MedRep edits and resubmits.

SPEAKER NOTES

"Our past workflow alignment solved major field friction: if a doctor already exists in our masterlist, MedReps don't wait for managers—it transitions to Processed instantly. But if it's a completely new doctor, it safely diverts to Pending Approval for DSM review, protecting our universal masterlist from invalid or duplicate entries."

SLIDE 6

KEYPOINT 2: PRESENT UPDATES

Present Updates: Active Release V.0.4.6 (Build 17)

Current sprint applied functionality, verified release binaries, and system health.

0 Errors

COMPILATION STATUS

4/4 test suites passed via flutter test

V.0.4.6

ACTIVE VERSION

Build 17 • 56.6 MB APK with verified SHA-256

3,990+

FACILITIES AVAILABLE

Full coverage across all 17 regions

🔦 V.0.4.6 Applied Functionality & Features

- **1. Institution Non-Deletion & Continuous Resubmission (V.0.4.6):** Completely removed discard options across MedRep and SFE screens. MedReps can modify and resubmit rejected facilities continuously without data loss.
- **2. ERPNext Workflow & Role Alignment (V.0.4.5):** Resolved ERPNext HTTP 417 transition failures by assigning Sales Force Effectiveness role and updating Institution WF permissions for System Manager & Sales Manager.
- **3. Rejection Remarks Isolation (V.0.4.4):** Strict conditional gating ensures red rejection banners only appear on submissions that actually failed review. Approved, processed, and pending profiles display clean.
- **4. SFE Institution Proposal Capability (V.0.4.4):** SFE Specialists can directly propose new facilities into the masterlist from their dashboard.
- **5. Unlocked Pending Facility Profiling (V.0.4.3):** MedReps can immediately select and profile doctors using newly proposed institutions without waiting for managerial approval.
- **6. Dynamic Approval Notes Parity (V.0.4.3):** Displays amber note *"this institution is not yet approved"* while pending, and dynamically transitions to green note *"this institution is now approved"* upon SFE approval.

SPEAKER NOTES

"Now let's examine where we are today in V.0.4.6 (Build 17). We achieved 0 compilation errors and passed all automated test suites. In this release, we strictly enforced a zero-deletion policy: MedReps can continuously modify and resubmit rejected facilities without risk of accidental data deletion. We also resolved SFE workflow permissions on ERPNext, isolated rejection notes, and fully unlocked pending institution profiling with dynamic notes."

SLIDE 7

KEYPOINT 2: PRESENT UPDATES

Present Updates: Zero-Deletion & ERPNext Role Alignment

Continuous modify/resubmit flow and backend workflow authorization parity.

Zero Deletion Guarantee (V.0.4.6)

- **Removed 'Discard' Button:** MedReps cannot accidentally discard or delete proposed facilities from their submission list.
- **Continuous Modify & Resubmit:** Rejected facilities exclusively present 'Modify & Resubmit'. Reps can update name, address, or region and resubmit continuously.
- **No SFE Rejection Deletion:** Removed 'Reject & Delete Resubmission' branch. SFE rejections simply mark status as 'Rejected' with reason, preserving the facility record.
- **Decoupled Service Layer:** rejectInstitution no longer calls deleteInstitution.

ERPNext Role & Workflow Parity (V.0.4.5)

- **Problem Resolved:** Fixed ERPNext HTTP 417: Not a valid Workflow Action on SFE rejection.
- **Role Alignment:** Assigned explicit Sales Force Effectiveness role to active SFE account (lesantos@pims-marketing.com).
- **Multi-Role Transitions:** Updated Institution WF rules to allow Sales Force Effectiveness, System Manager, and Sales Manager on both Approve and Reject actions.
- **Client Fallback & CSRF:** Added CSRF verification and direct PUT update fallback.

Rejection Remarks Display Isolation (V.0.4.4)

Submissions in Approved, Processed, or Pending Approval states previously showed misleading red rejection remark banners because timeline comments were mapped indiscriminately. In V.0.4.4, strict conditional gating ensures **only submissions that actually underwent rejection** display the red rejection card.

SPEAKER NOTES

"Slide 7 highlights our two major backend and workflow hardening updates: In V.0.4.6, we eliminated the discard and deletion options for proposed institutions, ensuring MedReps can continuously modify and resubmit without data loss. In V.0.4.5, we fixed the ERPNext workflow role mismatch that caused rejection failures, ensuring seamless approval and rejection across all manager personas."

SLIDE 8

KEYPOINT 2: PRESENT UPDATES

Present Updates: Status Parity & Dynamic Approval Notes

Direct 1:1 visual match with dev.pmi-marketing.com and real-time approval status labeling.

WORKFLOW STATE	MOBILE BADGE	FIELD USABILITY STATUS & DYNAMIC LABEL
Approved	[Approved]	Verified healthcare facility. Selectable for all doctor profiling. Displays green note: "this institution is now approved" .
Pending Approval	[Pending Approval]	Proposed facility under SFE review. Fully usable by MedReps for doctor profiling. Displays amber note: "this institution is not yet approved" .
Draft	[Draft]	Baseline masterlist facility imported from national registry (3,900+ facilities). Fully selectable for doctor profiling.
Rejected	[Rejected]	Declined by SFE Specialist with mandatory remarks. Blocked from profiling; continuously editable for resubmission .

 Search Filter Engine Parity

Features a collapsible [= Filter] bar, inline [Clear Filters] red badge, dynamic counter (Showing X of Y), bi-directional sort controls, and 1-tap clipboard copying for facility IDs.

SPEAKER NOTES

"On Slide 8, we review our DocType status parity and dynamic approval note workflow. MedReps can immediately select and profile doctors using newly proposed institutions under the clear visual indicator 'this institution is not yet approved'. When the SFE Specialist approves it, the note dynamically flips to 'this institution is now approved'. Our collapsible search filter engine makes managing 3,990+ facilities effortless."

SLIDE 9

KEYPOINT 3: FUTURE UPDATES

Future Updates: Mobile Enhancements (Tabs & Ergonomics)

Implementing user-requested tab restructuring, hidden views, and mandatory fields (Part 1).

1. Consent Tab Last

- **User Request:** "Consent must be display at the last of the tab."
- **Target Sequence:** 1. Doctor Info → 2. Questionnaire → 3. Consent.
- **Ergonomics:** Aligns with the natural chronological flow of medical sales visits.

2. Hidden 'Others' Tab

- **User Request:** "Others tab must be hidden."
- **Streamlined UI:** Eliminates low-utility tab from submission and wizard views.
- **Visual Ergonomics:** Saves horizontal screen width and avoids tab overflow.

3. Continuous GPS

- **User Request:** "Geolocation should be active all the time."
- **Always-Active:** Keeps GPS service active during profiling sessions.
- **Smart Matching:** Auto-prioritizes nearby hospitals with geo-timestamps.

4. Mandatory Legend

- **User Request:** "Legend of mandatory field in Doctor's Information."
- **Top Banner:** Clear banner: "** Indicates required fields for profiling submission".
- **Zero Guesswork:** Fast and clear form completion for field reps.

SPEAKER NOTES

"Here are the first 4 future enhancements: First, re-ordering the tabs so Consent is last (Doctor Info → Questionnaire → Consent). Second, hiding the Others tab to clean up the interface. Third, making Geolocation always active for continuous location awareness. Fourth, adding a clear legend of mandatory fields in Doctor's Information."

SLIDE 10

KEYPOINT 3: FUTURE UPDATES

Future Updates: Validation, Deduplication & Audit

Mandatory specialization, missing field pop-ups, duplicate detection, and audit layout (Part 2).

5. Mandatory Specialty (*)

- **User Request:** "Specialization & Workplace is mandatory (must have an *)."
- **Asterisk (*):** Red marker beside Specialization * and Workplace *.
- **Strict Gating:** Blocks progression if either required field is unselected.

6. Missing Fields Modal

- **User Request:** "Add an pop-up notification on which the user knows what field is lacking."
- **Smart Modal:** Itemizes missing fields before submit.
- **1-Tap Jump:** Tapping an item jumps directly to the field.

7. Duplicate Detection

- **User Request:** "Duplicate detection."
- **Multi-Factor:** Checks PRC License Number, Doctor Full Name, and Clinic.
- **Cross-DB:** Validates across local SQLite and ERPNext server.

8. Changes Below Consent

- **User Request:** "Changes will be available below of the consent."
- **Integrated Audit:** Moves revision logs directly below the Consent section.
- **Single Screen:** Full doctor context, signature, and change history in one place.

SPEAKER NOTES

"Here are the remaining 4 future enhancements: Fifth, making Specialization and Workplace mandatory with red asterisks (*). Sixth, adding a pop-up modal listing exactly what fields are lacking before submission. Seventh, real-time duplicate detection across PRC licenses and names. Eighth, moving the Changes audit history directly below the Consent section."

SLIDE 11

LIVE DEMONSTRATION & VALIDATION

Test Credentials Matrix & 4-Minute Live Demo Script

Verified credentials configured on server and step-by-step multi-role demonstration script.

PERSONA / ROLE	LOGIN EMAIL / USERNAME	PASSWORD	SCOPE & ACCESSIBLE FEATURES
Field MedRep	arlaneferraren8@gmail.com	UEPCS101c!	Bayer / Universal, My Submissions, Doctor Wizard, Propose facility with continuous resubmit.
SFE Specialist	lesantos@pims-marketing.com	UEPCS101c!	SFE Approval Hub, multi-program switcher, Propose facility, Review & Approve pending institutions nationwide.
System Administrator	jptan@profinsights.biz	UEPCS101c!	Universal access across all DocTypes, Masterlists, SFE portal toggle, and Backend Settings.

4-Minute Live Demonstration Walkthrough

- Step 1 (MedRep Directory Search):** Log in as MedRep (arlaneferraren8@gmail.com) → Open Institution Directory → Click [= Filter] → Type 'Bacoor' in City → Counter displays 'Showing 3 of 3,990' → Tap [Clear Filters].
- Step 2 (Propose Facility & Profiling):** Open Institution Submission → Tap + Propose New Institution → Submit 'Apex Care Clinic - Test' → Open Doctor Wizard → Select clinic → Amber note appears: "this institution is not yet approved" → Doctor profiles smoothly!
- Step 3 (SFE Rejection & Continuous Resubmit):** Log in as SFE Specialist (lesantos@pims-marketing.com) → Reject with reason "Missing street address" → MedRep receives rejection → Taps **Modify & Resubmit** (no discard button!) → Adds address and resubmits immediately!
- Step 4 (Existing Doctor Profiling):** Start profiling → Pick Existing HCP → Select clinic → Submit → State transitions to **PROCESSED** instantly (0 manager waiting)!
- Step 5 (SFE Facility Approval):** SFE Specialist reviews resubmitted clinic → Clicks Approve → Doctor profile automatically updates note to emerald green: "this institution is now approved"!

SPEAKER NOTES

"Here are the exact test credentials configured on our server. During your presentation, you can run through these 5 quick steps. In under 4 minutes, your audience will see the search filter in action, the instant processing of existing doctors, the new continuous modify & resubmit flow without deletion, and the SFE Specialist facility approval."

Summary & Retrospective: Key Takeaways

Consolidating past architectural foundations, current sprint deliverables, and the upcoming 8-point roadmap.

LIFECYCLE PHASE	STRATEGIC FOCUS	DELIVERABLES & ENHANCEMENTS
PAST UPDATES (V.0.1.0 - V.0.4.2)	Foundations & Architecture	Two-Tier Masterlist, 3-step offline wizard, 0-bottleneck existing doctor flow, PSGC hierarchy, DSM territory scoping, and unified search filter engine.
PRESENT UPDATES (V.0.4.6)	Zero-Deletion & Workflow Parity	Institution non-deletion guarantee, continuous modify & resubmit, SFE role alignment (HTTP 417 fix), rejection remarks isolation, SFE facility proposal, unlocked pending profiling, and dynamic approval notes.
FUTURE UPDATES (The 8 Suggestions)	Mobile Ergonomics & Quality	1. Consent tab last (Doctor Info → Questionnaire → Consent) 2. Others tab hidden 3. Geolocation active all the time 4. Mandatory field legend 5. Specialization & Workplace mandatory (*) 6. Missing fields pop-up modal 7. Duplicate detection 8. Changes placed below consent

SPEAKER NOTES

"In summary: In the past, we laid down clean data architecture and eliminated profiling bottlenecks across versions V.0.1.0 through V.0.4.2. In the present V.0.4.6 release, we enforced a zero-deletion policy with continuous modify and resubmit, aligned SFE workflow permissions, isolated rejection remarks, and verified clean builds with 0 compiler errors. And in the future, we will implement the 8 requested mobile enhancements. Thank you for your continued partnership."
